

# High performance composite doors

**Combining modern design and technology with traditional, classic looks this high performance Composite door represents outstanding quality and value for the Homeowner**

West-End Windows Composite door has been independently tested and demonstrated to exceed industry standards for air permeability, water penetration and thermal insulation. Accredited with PAS 023, PAS 024, and Secured by Design, these composite doors are proven over ten years.

The classic look of traditional timber doors, with the latest technology and enhanced features means this door has the best of both worlds.

With a wide range of colours, styles, glazing options and security features this door is ideal for the discerning homeowner.

## Features & Benefits:

**Composite Construction** - High impact Thermoplastic skins over a quality laminated timber subframe with a high density polystyrene foam centre, fitted into a uPVC frame, to provide better looks, high security and enhanced thermal performance.

**Patented Glazing System** - No more ugly glazing cartridges, the West-End Composite Door features a beaded glazing system to enhance looks and ensure easy remedial work.

**Colour Options** - Exterior colours can be red, blue, green, or white with optional rosewood, oak or mahogany grained finishes.

**Glazing Options** - A choice of styles (see over) and a range of glass designs to ensure every home can be individual.

## The Hidden Properties

1. All West-End Windows doors are glazed with 4mm toughened glass (BS6262) in relation to human impact. Laminated glass is available as an option for high risk security or safety areas. WEW has developed an attractive range of decorative glass options, Contact us for information.

2. A patented glazing system has been developed for the WEW door. A glass unit can be fitted or replaced in seconds by removing a bead from the inside with no special training and no need for replacement parts.

3. At the heart of every WEW door is a high density expanded polystyrene core.

4. A high quality, laminated timber subframe has been chosen for its combination of strength, workability and dimensional stability

5. All WEW doors are faced with high impact thermoplastic skins. Whether you choose simple white, a colour or a woodgrain foil, you need never worry about painting or staining.

6. The unique 'Edge Guard' further enhances the appearance of the door leaf and adds extra protection against damage.
